NRW Minister President Hendrik Wüst visits Humintech

"Making good jobs crisis-proof is the topic these days. This company also depends on secure and affordable energy supplies. Crisis-proof jobs need energy security and attractive location conditions. That's what we've been working on in recent years. Since the change of government in 2017, around 400,000 additional jobs have been created," said Minister President Hendrik Wüst during his visit to Humintech. In view of the high inflation, he said, reductions in taxes on energy are necessary over and above the relief packages of the German government in order to bring noticeable relief.

The two Humintech managing directors Müfit Tarhan and Aydogan Cengiz, Dr. Yasser Dergham and Berthold Stern from technology and research as well as Mr. Tolga Halici as presenter and board member of ATIAD (Association of Turkish Entrepreneurs and Industrialists in Europe e.V., Düsseldorf) invited to visit production halls and company premises. The invitation was accepted not only by the Minister President but also by Mr. Hermann Gröhe and Mrs. Serap Güler as Members of the German Bundestag and Mrs. Heike Troles, Member of the Grevenbroich Regional Parliament.

After a tour of the production facilities, it was off to the meeting room for the technical details. "More than 20 years ago, we decided in Düsseldorf to refine these unique raw materials to the highest quality standards "made in Germany" and to use them for environmental protection. Today, we are a multicultural team of almost 60 employees from

more than ten nationalities. We are grateful for the production location NRW and the opportunities we have experienced ourselves and can pass on today as a training company," Aydogan Cengiz welcomes the guests.

Since 2001, the company has been producing biological soil conditioners and biostimulants that can mitigate the effects of abiotic stress factors in agriculture, such as those that are occurring more frequently as a result of climate change – droughts, heavy rainfall and temperature shifts. Customers operate in more than 70 countries and ensure not only humus levels in the soil but also uniform harvests in wine-growing regions in Iran, potato fields in southern Germany and berry crops in South America.

The prime minister concludes, "My parents, who were born in '38 and '42, always said, 'If you can do something, you have something, you are something.' And it was the same with the first generation of immigrants. Today, in the second and third generations, there are many entrepreneurs with a migration history who, with their strong companies, are part of a shared success story in North Rhine-Westphalia. Thank you very much for your commitment and for your entrepreneurial achievements."
